

Two internship positions in the group Behavioral Neurogenetics of dr. Judith Homberg

What?

Project one. Internship position available for a project about serotonin and its cognitive function in rodents. In this project you will help investigate cognitive function of rats in a touchscreen based behavioral task. In this project, you will learn to build up a homecage with operant box, where rats learn to acquire rewards by touching iPad.

Project two. This project is about mitochondria disease, in which Ndufs knockout mice is treated with a new compound. We will perform genetic effect and the compound effects on brain activity and its structure by using fMRI technique.

When?

As soon as possible.

Where?

Cognitive Neuroscience department, Behavioral Neurogenetics – group of dr. Judith Homberg
