

Master Internship Opportunity: Investigate *Sphagnum* moss performance in rewetted peatlands

The Department of Aquatic Ecology and Environmental Biology at Radboud University invites enthusiastic and motivated students to join our inspiring team.

Description: Explore a unique opportunity to contribute to the sustainable management of rewetted peatlands. We're currently dedicated to understanding the performance of various *Sphagnum* species under diverse conditions. You'll play a pivotal role in our three-year multispecies field-scale experiment. Depending on your interests, you can engage in lab and data analysis or undertake your own experiment.

Expected Qualifications: We are looking for individuals who are passionate about ecology and eager to contribute to cutting-edge research. You should possess strong organisational skills, attention to detail, and the ability to work both independently and collaboratively within a dynamic team.

Application: If you're excited about this opportunity, please, do not hesitate to contact us:
