

One of our research groups at One Planet (a consortium of RU/RUMC/WUR and imec) working on Food tech is looking for a student researcher with background in Molecular Biology/LifeSciences. The project is suitable for a Master student internship.

More description can be found here:

<https://www.imec-int.com/en/work-at-imec/job-opportunities/student-project-emerging-pathogens-food-optimization-approach>

It would be great if you could please share this with the students. If there are questions, I am happy to connect the student with the R&D Lab at Wageningen. Is it fine if I share other such opportunities with you in the future?

Often internships are posted here: <https://www.oneplanetresearch.nl/working-at/> or on the imec NL website. I am afraid that some postings maybe obsolete as website is being updated.

Thank you,

Kind Regards

Neha
